

When you're finished, upload the following to the Programming Assignment submission area:

- **Quiz.java**
- Screenshot showing the input dialog with a new quiz question, not the one from the previous assignment
- Screenshot showing the message dialog for an incorrect answer
- Screenshot showing the message dialog for the number of questions and correct answers

Your assignment will be graded by your peers using the following criteria.

- Does the submission include a static method "**ask**" that returns a String and takes a String parameter?
- Does the "**ask**" method use "JOptionPane.showInputDialog" to ask the question provided as a parameter?
- Does the "**ask**" method return only a valid answer converted to all upper case?
- Does the submission include a static method "**check**" that takes two String parameters?
- Does the "**check**" method call the "ask" method with one of its parameters?
- Does the "**check**" method display one message for correct answers and a different message for incorrect answers?
- Does the "**check**" method update static member variables to count the number of questions and the number of correct answers?
- Does the main method call "**check**" with at least three different questions and answers?
- Does the main method display the number of questions and the number of correct answers using the static member variables?
